Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Application No. Applicant(s) 10/677.011 FERLITSCH, ANDREW R. Office Action Summary Examiner Art Unit Peter K. Huntsinger -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 10 July 2008. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-20 is/are pending in the application. 4a) Of the above claim(s) _____ is/are withdrawn from consideration. 5) Claim(s) _____ is/are allowed. 6) Claim(s) 1-20 is/are rejected. 7) Claim(s) _____ is/are objected to. 8) Claim(s) _____ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. Attachment(s)

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/10/08 has been entered.

Response to Arguments

 Applicant's arguments filed 7/10/08 have been fully considered but they are not persuasive.

The applicant argues on page 10 of the response in essence that:

The allegedly well known prior art fails to teach the recited claim limitations.

- a. The Official Notice rejection was first made in the non-final rejection on 9/28/07. According to the MPEP 2144.03, if the applicant does not traverse the examiner's assertion of official notice by the next action, the common knowledge or well-known in the art statement is taken to be admitted prior art (See MPEP 2144.03(C)).
- Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/677,011 Page 3

Art Unit: 2625

Claim Rejections - 35 USC § 103

 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior at are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-6 and 8-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frolik '804 in view of Scheidig '565, Cartier '654 and well known prior art.

Referring to **claim 1**, Frolik '804 discloses in a printing environment, a method for specifying application specific printing requirements for an arbitrary printing device, the method comprising:

providing a printing device having a plurality of default device setting sets (col. 2, lines 18-26, printer settings);

configuring one of the default device setting sets by selectively associating an application specific name with one of:

- (i) a standard default setting set; and
- (ii) an application specific default setting (col. 2, lines 3-10, user-selected sets are associated with the application or globally associated with the computer system);

identifying which of the default device setting sets are to be used in rendering a particular print job (block 349 of Fig. 6, col. 9, lines 22-34, checks for application specific printer settings).

Art Unit: 2625

Frolik '804 does not disclose expressly storing the plurality of default device setting sets in the memory of the printing device.

Scheidig '565 discloses having a plurality of default device setting sets stored in memory of the printing device (col. 3, lines 51-67, 1-2, printer includes control panel which stores plurality of setup data sets [see Fig. 2] comprising control data).

At the time of the invention, it would have obvious to a person of ordinary skill in the art to store printer settings in the memory of the printer. The motivation for doing so would have been to store data locally to increase retrieval speed and shorten access time.

Frolik '804 does not disclose expressly configuring one of the default device setting sets using a pseudo print job.

Cartier '654 discloses configuring a device setting using a pseudo print job (col. 8, lines 16-40, a user may modify a printer setting through a PJL command [i.e. a print job language command without print job data]).

At the time of the invention, it would have obvious to a person of ordinary skill in the art to configure a printer setting using a PJL command. The motivation for doing so would have been to utilize a widely used high level printer language that can query or modify the value of certain printer settings.

Frolik '804 does not disclose expressly rendering the print job without a fully compatible printer driver or a printer definition.

Official Notice is taken that it is well known and obvious at the time of the invention to utilize a printer driver that is not fully compatible with the printer or a printer

Art Unit: 2625

definition (See MPEP 2144.03). The motivation for doing so would have been to utilize a generic printer driver/definition so as to not require installing the specific driver/definition when a generic one is readily available. Therefore, it would have been obvious to combine Scheidig '565. Cartier '654 and well known prior art with Frolik '804

Referring to claim 2, Frolik '804 discloses wherein the plurality of default device setting sets comprise:

(i) a factory default setting set;

to obtain the invention as specified in claim 1.

- (ii) the standard default setting set; and
- (iii) the application specific default setting set (col. 5, lines 6-16, default preferences).

Referring to claim 3, Frolik '804 discloses wherein identifying which of the default device setting sets are to be used in rendering a particular print job is performed based on a characteristic of the print job (block 349 of Fig. 6., col. 9, lines 22-34, document and application specific printer settings).

Referring to claim 4. Frolik '804 discloses the characteristic is one of:

- (i) a job name;
- (ii) a user name;
- (iii) a document name;
- (iv) an account code; and
- (v) a department code (col. 9, lines 22-34, document specific printer settings).

Art Unit: 2625

Referring to claim 5, Cartier '654 discloses wherein the pseudo print job includes one or more commands that instruct the printing device to change and store in the memory of the printing device a setting of the default device setting set being configured (col. 8, lines 16-40, a user may modify a printer setting through a PJL command [i.e. a print job language command without print job data]).

Referring to claim 6, Cartier '654 discloses wherein the one or more commands comprises a print job language DEFAULT command (col. 8, lines 16-40, PJL command modifies the font priority print setting).

Referring to claim 8, Frolik '804 discloses the application specific default setting but does not disclose expressly using a flag to prevent the application specific default setting from being changed.

Official Notice is taken that it is well known and obvious at the time of the invention to utilize a flag to prevent information from being changed. The motivation for doing so would have been to prevent unintentionally changing information. Therefore it would have been obvious to combine well known prior art with Frolik '804 to obtain the invention as specified in claim 8.

Referring to claim 9, Frolik '804 discloses associating an application specific name with the application specific default setting to create a named default setting (col. 2. lines 3-10. user-selected sets are associated with the application); and

allowing the standard default setting set to be unchanged (col. 7, lines 50-55, user need not change the global printer settings).

Art Unit: 2625

Referring to claim 10, Frolik '804 discloses configuring the print job based on the named default setting; and

modifying the named default setting by a job specific setting (block 343, col. 9, lines 14-21, document specific printer settings).

Referring to claim 11, Frolik '804 discloses

A printing device comprising: a plurality of default device setting sets (col. 2, lines 18-26, printer settings) wherein the default device setting sets are configured by selectively associating an application specific name with one of (i) a standard default setting set and (ii) an application specific default setting (col. 2, lines 3-10, user-selected sets are associated with the application or globally associated with the computer system), and wherein one of the default device setting sets is used in rendering a particular print job (block 349 of Fig. 6, col. 9, lines 22-34, checks for application specific printer settings)

Frolik '804 does not disclose expressly storing the plurality of default device setting sets in the memory of the printing device.

Scheidig '565 discloses having a plurality of default device setting sets stored in memory of the printing device (col. 3, lines 51-67, 1-2, printer includes control panel which stores plurality of setup data sets [see Fig. 2] comprising control data).

At the time of the invention, it would have obvious to a person of ordinary skill in the art to store printer settings in the memory of the printer. The motivation for doing so would have been to store data locally to increase retrieval speed and shorten access time

Art Unit: 2625

Frolik '804 does not disclose expressly configuring the default device setting sets with an embedded device web page.

Hawes '436 discloses configuring device settings with an embedded device web page (Fig. 4, col. 8, lines 3-30, devices 102, 106 includes services for setting properties with a browser).

At the time of the invention, it would have obvious to a person of ordinary skill in the art to configure device settings using an embedded webpage. The motivation for doing so would have been to provide a more convenient method for the user to modify printer settings.

Frolik '804 does not disclose expressly rendering the print job without a fully compatible printer driver or a printer definition.

Official Notice is taken that it is well known and obvious at the time of the invention to utilize a printer driver that is not fully compatible with the printer or a printer definition (See MPEP 2144.03). The motivation for doing so would have been to utilize a generic printer driver/definition so as to not require installing the specific driver/definition when a generic one is readily available. Therefore, it would have been obvious to combine Scheidig '565, Hawes '436 and well known prior art with Frolik '804 to obtain the invention as specified in claim 11.

Referring to claim 12, see the rejection of claim 2 above.

Referring to claim 13, Frolik '804 discloses wherein the print job is one of:

- (i) a fax job;
- (ii) a scan job;

Page 9

Application/Control Number: 10/677,011

Art Unit: 2625

(iii) a copy job; and

(iv) a document management job (col. 2, lines 27-31, document retrieval).

Referring to claim 14, see the rejection of claim 1 above.

Referring to claim 15, see the rejection of claim 2 above.

Referring to claim 16, see the rejection of claim 3 above.

Referring to claim 17, see the rejection of claim 4 above.

Referring to claim 18, see the rejection of claim 5 above.

Referring to claim 19, see the rejection of claim 9 above.

Referring to claim 20, see the rejection of claim 10 above.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Frolik
 '804, Scheidig '565, Cartier '654 and well known prior art as applied to claim 1 above, and further in view of Taniquchi '707.

Referring to claim 7, Frolik '804 discloses utilization of the application specific default setting, but does not disclose expressly an authentication procedure.

Taniguchi '707 discloses an authentication procedure (\$609 of Fig. 6, col. 7, lines 21-23, user inputs password).

At the time of the invention, it would have obvious to a person of ordinary skill in the art to perform an authentication procedure. The motivation for doing so would have been to allow the user to keep desired information secret. Therefore, it would have been obvious to combine Taniguchi '707 with Frolik '804, Scheidig '565, Cartier '654 and well known prior art to obtain the invention as specified in claim 7.

Art Unit: 2625

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Peter K. Huntsinger whose telephone number is

(571)272-7435. The examiner can normally be reached on 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, David Moore can be reached on (571)-272-7437. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have guestions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
